

The Question

Clearly articulate the central question or problem your AI initiative aims to address. Ensure the question is specific, actionable, and aligned with your organization's objective to achieve wisdom, guiding the scope and direction of your project."

Wisdom

Define the type of wisdom your organization aims to achieve with its AI initiatives. Focus on how AI can enhance ethical decision-making, promote long-term sustainability, and augment human capabilities to create a positive impact on society and the organization.

Actors and Factors

Identify the actors and external/internal factors that influence your AI initiative. Consider how these actors and factors impact the development, implementation, and outcomes of your AI systems, ensuring you account for their roles, interests, and potential effects on the project's success.

Results

Define specific, measurable results that demonstrate how the AI system will achieve the intended wisdom, enhance decision-making, and create positive impacts for the organization and society.

Assessment

Make considerations to establish the Viability of your idea!

Viable

What AI to use and is the AI technology available and does it fit the problem?

Valuable

How is the AI adding value to customer / organization / employee / society?

Vital

Why is using AI vital?

Ethical

What are your ethical considerations?

Knowledge

Specify the key sources and types of knowledge that will inform your AI initiatives. Emphasize both tacit and explicit knowledge, and outline processes for effectively integrating diverse knowledge streams to support informed and adaptive decision-making.
